

A New Dimension of Movement Therapy

We are introducing the "new" MOTOmed!
- software version 5.01 -

- MOTOMax** increases motivation and fun
The new MotivationProgram MOTOMax for a more exciting training. Coordination, concentration and muscle strength are trained. In return you are rewarded with a smile, jumps for joy and champion points.

- New therapy programs** efficient and individual
Each person is different, especially each indication is individual. Therefore the new MOTOmed offers a variety of therapy programs:
 - a selection of 14 different TherapySequencePrograms, depending on indication, therapy goals and options
 - create your own TherapySequenceProgram or simply modify your existing therapy program according to your therapy goals and possibilities.

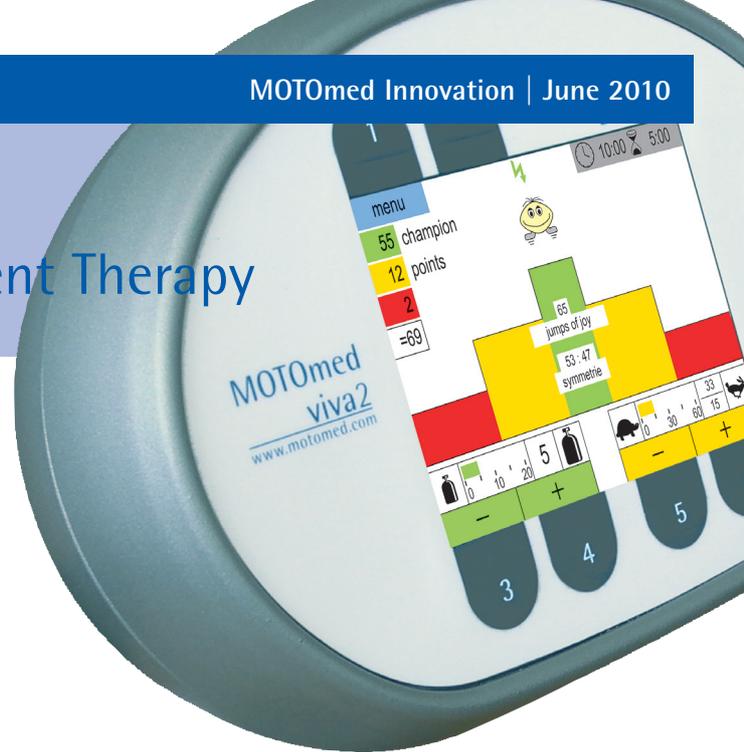

The new Therapy Programs allow for a wide range of settings, e.g. automatic increase and decrease of resistance in a preset period of time (similar to a digital mountain program of a stationary bike). There are various innovative options available to customize your training according to the individual needs. Contact your MOTOmed representative for further information!

- Biofeedback** The large color screen indicates your training method, status and progress in real-time. This allows for your immediate interaction in order to achieve your individual training goal.
What is important for you? Choose by yourself:
 - large and clear readout, focusing on one single training data per screen
 - an overview of the most important training data
 - 24 significant training results of your current session are automatically saved to the MOTOmed. Additionally there is a training summary of all training sessions showing your total training results. This simplifies your long-term analysis and your coordination with your doctor and therapist.

Accessories

The new MOTOmed viva2 software provides the basis for a more detailed analysis on the screen as well as for the new TrainingAnalysisProgram sam2 (accessory). There are extended feedback options available, e.g. "MOTOmed Pulse Control Cardio16" for pulse controlled training with automatic adjustment of resistance levels for an optimized training and for your safety.

MOTOmed – always one step ahead – for your convenience.

MOTOMax motivates!
