

Royal United Hospital Hospital Bath ICU

Our MOTomed LETTO bed bike is a great piece of kit, it benefits a wide range of patients whether they can actively or passively engage in therapy. Recently we've had a handful of patients who prior to their admission were keen cyclist and they enjoyed the familiarity of pedalling again. Furthermore, this allows the patient to feel independent and have more control over their exercise, it compliments their rehab programmes perfectly. It is a vital piece of equipment for any critical care setting.

Yours sincerely,

Trina Sharland and Julie Brock
